MR ROKESH TECHNOLOGY

Duration Framework & Assessment Guide

Applies to all technical tracks. See individual track files for track-specific capstones and tools.

Duration Tiers

Duration	Hours	Depth	Projects	Outcome Level
2 Weeks (Crash)	40–50 hrs	Awareness + core syntax	1 mini project	Can build basic apps; needs mentorship
1 Month	80–100 hrs	Foundation + workflow	2 guided projects	Junior-ready basics
3 Months	250–300 hrs	Intermediate + integration	3–4 projects	Internship-ready
6 Months	500–600 hrs	Advanced + deployment	5–6 + 1 capstone	Job-ready (entry–mid)
9 Months (Advanced)	750–900 hrs	Expert + specialization	8–10 + 2 capstones	Industry-ready + certification prep

Outcome Details by Tier

- 2 Weeks — Crash** - Understand core concepts and syntax - Complete one guided mini project with mentor support - Deploy or demo a basic working application - Needs continued mentorship for production work
- 1 Month — Foundation** - Solid grasp of fundamentals and developer workflow - Use Git/GitHub for version control - Build 2 guided projects independently with review - Ready for internship screening at junior level
- 3 Months — Job Ready** - Integrate frontend, backend, and database concepts - Complete 3–4 projects including one capstone - Write clean, documented code with README portfolio entries - Eligible for internship and entry-level roles
- 6 Months — Professional** - Build production-grade applications with auth, deployment, and testing - Complete 5–6 projects plus one major capstone - Participate in code reviews and mock interviews - Job-ready for entry to mid-level positions
- 9 Months — Advanced** - Master specialization topics (TypeScript, microservices, MLOps, etc.) -

Complete 8–10 projects plus two capstones - Prepare for industry certifications - Industry-ready with system design and portfolio depth

Weekly Structure (All Durations)

Day	Activity	Focus
Mon–Thu	Concept + live coding lab	70% hands-on; mentor demonstrates then students build
Fri	Mini-project / assignment submission	Apply week’s topics to a scoped deliverable
Sat	Code review + doubt clearing	Peer review, mentor feedback, Q&A session
Sun	Revision + documentation	Study notes, GitHub README, portfolio update

Weekly Hour Allocation (Example: 3-Month Track)

Activity	Hours/Week	%
Live labs (Mon–Thu)	12–16 hrs	70%
Theory / concept sessions	4–6 hrs	30%
Project work (Fri)	3–4 hrs	—
Review + docs (Sat–Sun)	2–3 hrs	—
Total	~20–25 hrs/week	—

Assessment Formula

Component	Weight	Criteria
Weekly Quiz	20%	Concept retention; 10–15 MCQ + 1 short answer
Lab Completion	40%	All lab checkpoints submitted; code runs; follows rubric
Project	30%	Functionality, code quality, demo, documentation
Portfolio	10%	GitHub README, screenshots, live demo link, commit history

Example Grade Calculation

Component	Score	Weight	Weighted
Quiz average	85%	20%	17.0
Lab completion	90%	40%	36.0
Project	78%	30%	23.4
Portfolio	95%	10%	9.5
Final Grade			85.9%

Pass threshold: 60% overall with minimum 50% on project component.

GitHub Portfolio Requirements

Every student maintains a public GitHub profile with:

1. **Profile README** — Name, track, skills, contact
2. **One repo per project** with structured README containing:
 - Project title and one-line description
 - Tech stack used
 - Screenshots or demo GIF
 - Setup/installation instructions
 - Live demo URL (when applicable)
 - What you learned (3–5 bullets)

README Template Snippet

```
# Project Name

One-line description of what this project does.

## Tech Stack
- React, Node.js, MongoDB, etc.

## Features
- Feature 1
- Feature 2

## Setup
1. Clone repo
2. npm install
3. npm start

## Live Demo
https://your-app.vercel.app

## What I Learned
- Bullet 1
- Bullet 2
```

Mentor Review Checklist (Weekly)

- ☐ Student attended minimum 80% of live sessions
 - ☐ Lab checkpoints submitted by Friday deadline
 - ☐ Code runs without errors on clean environment
 - ☐ GitHub commit history shows incremental progress
 - ☐ README updated with current project state
 - ☐ Quiz completed with score recorded
-
