

Track 12: School & College Projects (Support Service)

June 2026

Track 12: School & College Projects (Support Service)

MR ROKESH TECHNOLOGY — Training & Internship Programs

Service type: *Integrated support across durations — not a standalone technical track*

Related: [Master Syllabus](#) | [Track 13 — Thesis Writing](#) | [Track 14 — Career Development](#)

Pairs with technical tracks: [Track 1 — Full Stack](#) | [Track 4 — Mobile](#) | [Track 5 — AI/ML](#)

Service Overview

Who this is for: School students (mini projects), college students (major/final-year projects), and students needing guided implementation alongside academic requirements.

Prerequisites: Enrollment in or completion of relevant technical track topics; project topic approved by mentor.

Support model: Milestone-based deliverables with mentor touchpoints — not daily coding labs.

Project types: Mini (IoT simulation, web app) → Academic (ML-based, Android app) → Major (full-stack + cloud + AI integration)

Outcomes by Duration

Duration	Support Level	Key Deliverables
2 Weeks	Guidance only	Topic + synopsis + basic implementation plan
1 Month	Guided mini project	Working mini project + documentation template
3 Months	Module development	Major project modules + weekly mentor reviews
6 Months	Full project	Complete final-year project (frontend + backend + DB) + testing
9 Months	Research-grade	Research project + paper writing support + viva prep

Mentor Touchpoint Schedule

Duration	Touchpoints	Format
2 Weeks	3 sessions	Topic review, synopsis feedback, implementation Q&A
1 Month	Weekly (4)	Progress review + documentation check
3 Months	Weekly (12)	Module review + integration guidance
6 Months	Weekly (24)	Full SDLC support + testing review
9 Months	Bi-weekly (18+)	Research methodology + paper + viva coaching

2 Weeks — Topic & Synopsis Support

Deliverables: Topic selection + synopsis + basic implementation guidance

Milestone	Day	Deliverable	Mentor Review
M1	D1–2	3 topic options with feasibility analysis	Select 1 topic
M2	D3–5	Synopsis (2 pages): problem, objective, methodology	Approve synopsis
M3	D6–10	Basic implementation plan + tool list	Q&A session

Acceptance criteria: - ☐ Topic aligned with academic requirements and institution guidelines - ☐ Synopsis includes problem statement, objectives, scope, and tools - ☐ Implementation plan with week-by-week student tasks

1 Month — Mini Project Support

Deliverable: Full mini project + documentation template

Week	Milestone	Student Output
W1	Requirements + design	SRS (5 pages) + wireframes/flowchart
W2	Core implementation	Working prototype (50% features)
W3	Complete implementation + testing	Full working project
W4	Documentation + presentation	Report draft + PPT (10 slides)

Acceptance criteria: - ☐ Project runs and demonstrates core functionality - ☐ Documentation follows institution template - ☐ Screenshots and test cases included

3 Months — Major Project Module Development

Deliverable: Major project modules with weekly mentor reviews

Month	Focus	Milestones
M1	Requirements, design, architecture	SRS, UML diagrams, DB schema
M2	Module 1 + Module 2 implementation	Frontend + backend core
M3	Integration, testing, documentation	Integrated system + test report

Weekly mentor review covers: Progress vs plan, code quality, blockers, next-week goals.

Acceptance criteria: - ☐ All modules integrated and tested - ☐ ER diagram, DFD, UML included - ☐ Unit test results documented

6 Months — Complete Final-Year Project

Deliverable: Full final-year project (frontend + backend + DB) + testing

Phase	Weeks	Focus
Planning	1–4	Requirements, design, tech stack finalization
Development	5–16	Iterative module development (2-week sprints)
Testing	17–20	Unit, integration, UAT
Documentation	21–24	Final report, slides, demo video

Acceptance criteria (L4): - ☐ Full-stack or equivalent major project deployed or demo-ready - ☐ Test cases with pass/fail results - ☐ Final report 40+ pages (institution format) - ☐ 15-minute demo video

9 Months — Research-Oriented Project

Deliverable: Research project + paper writing + viva prep

Phase	Focus
M1–M2	Literature survey, problem definition, methodology
M3–M6	Implementation + experimentation + results
M7–M8	Paper writing (IEEE/APA format)
M9	Viva preparation + defense coaching

Acceptance criteria (L5): - [] Literature review (20+ references) - [] Experimental results with analysis - [] Draft paper submitted to mentor - [] 50+ viva Q&A practiced

Assessment Rubric (Support Service)

Component	Weight	Criteria
Milestone Completion	40%	On-time deliverables per schedule
Project Quality	30%	Functionality, code/report quality
Documentation	20%	Report, diagrams, presentation
Mentor Evaluation	10%	Engagement, responsiveness, improvement

Related Technical Tracks by Project Type

Project Type	Recommended Track
Web application	Track 1 — Full Stack
Android/mobile app	Track 4 — Mobile
ML/AI project	Track 5 — AI/ML
IoT/simulation	Track 3 — Programming
Cloud deployment	Track 7/8 — DevOps/Cloud

Appendix: Mentor Notes

Common pitfalls: Topic too broad; starting coding before design; ignoring college formatting guidelines; plagiarism in report.

Policy: All code must be student-authored with mentor guidance; plagiarism check required before final submission (see [Track 13](#)).

Cross-track: Report writing support in [Track 13](#); viva prep in [Track 14](#).
