

Track 15: DevOps Engineering

June 2026

Track 15: DevOps Engineering

MR ROKESH TECHNOLOGY — Training & Internship Programs

Skill path: Linux → Git → CI/CD → Docker → Kubernetes → Terraform → Monitoring → GitOps → SRE

Related: [Track 7 — Cloud & DevOps](#) | [Track 8 — Cloud Platforms](#) | [Master Syllabus](#)

Track Overview

Who this is for: Aspiring DevOps engineers, SREs, platform engineers, and backend developers moving into infrastructure automation.

Prerequisites: Basic Linux and scripting helpful; programming basics (Python/Bash) recommended for 3-month+ tiers.

Tools: Ubuntu/Linux, Git, GitHub Actions, Jenkins, Docker, Kubernetes, Terraform, Ansible, Prometheus, Grafana, ArgoCD, Helm.

Certification targets: CKA, CKAD, AWS DevOps Engineer (optional, 9-month)

Outcomes by Duration

Duration	Hours	Job Readiness	Key Deliverables
2 Weeks	40–50	DevOps awareness	Containerized app + CI pipeline
1 Month	80–100	Junior DevOps basics	3-tier app on K8s (Minikube)
3 Months	250–300	Internship-ready	Full CI/CD + IaC capstone
6 Months	500–600	DevOps engineer entry	Production observable platform
9 Months	750–900	SRE/GitOps ready	Self-healing multi-env platform

Weekly Rhythm

Mon–Thu infrastructure labs | Fri automation milestone | Sat pipeline review | Sun runbook + GitHub docs

2-Week Crash Course

Mini Project: Containerized app with CI/CD pipeline | **Level:** L1

Days	Topics	Lab	Deliverable
D1–2	Linux admin, SSH, Bash scripting	Automation scripts	3 Bash utility scripts
D3–4	Git workflows, branching, GitHub Actions	CI pipeline	Build + test on push
D5–6	Docker, Dockerfile, Compose	Containerize web app	Multi-container setup
D7–8	K8s basics: pods, services, deployments	Minikube deploy	App running on K8s
D9–10	Monitoring intro, deploy live	CI/CD + deployed container app	Live URL + green pipeline

1-Month Foundation

Week	Topics	Project
W1	Linux, shell scripting, Git	Backup + log rotation scripts
W2	Docker, Compose, registry	3-tier containerized app
W3	Kubernetes, Helm charts	Deploy with Helm on Minikube
W4	CI/CD (GitHub Actions/Jenkins), secrets	Full pipeline to K8s

Capstone acceptance: CI runs tests; Docker image pushed; K8s deployment automated; secrets not in Git.

3-Month Job Ready

Month	Topics	Projects
M1	Linux, Git, scripting, networking	Automation toolkit
M2	Docker, Terraform, Ansible	IaC + config management
M3	K8s, Helm, Prometheus/Grafana, capstone	Production-style DevOps platform

Capstone: Multi-service app with CI/CD, Terraform infra, monitoring dashboard, rollback procedure documented.

6-Month Professional

Month	Topics	Labs/Projects
M1	Git internals, advanced CI/CD patterns	Labs 1–3
M2	Docker, Terraform modules, Ansible roles	Labs 4–6
M3	Prometheus, Grafana, Loki logging	Labs 7–8
M4	K8s advanced, Helm, secrets (Vault intro)	Labs 9–12
M5	GitOps (ArgoCD), blue/green deployments	Labs 13–14
M6	SRE practices, SLI/SLO, capstone	Observable production system

9-Month Advanced

Capstones: GitOps platform + self-healing multi-service architecture | **Level:** L5

Additional: DevSecOps (Trivy, SAST), service mesh (Istio intro), multi-cloud pipelines, incident response runbooks.

Assessment Rubric

Component	Weight	Criteria
Weekly Quiz	20%	Linux, Docker, K8s, CI/CD concepts
Lab Completion	40%	Pipelines green; infra applies cleanly
Project	30%	Architecture, automation, observability
Portfolio	10%	GitHub IaC repos, runbooks, diagrams

Appendix: Mentor Notes

Cross-track: Extends [Track 7](#) with deeper SRE/GitOps focus. Pair with [Track 8](#) for EKS/ECS deployment.

Hardware: 16 GB RAM, WSL2 or Linux VM for K8s labs.
