

# Track 8: Cloud Platforms (AWS / Azure / GCP)

June 2026

## Track 8: Cloud Platforms (AWS / Azure / GCP)

MR ROKESH TECHNOLOGY — Training & Internship Programs

**Skill path:** AWS → Azure → GCP → IAM → Compute → Storage → Serverless → Multi-cloud DR

**Related:** [Master Syllabus](#) | [Track 7 — DevOps](#) (deployment toolchain)

### Track Overview

**Who this is for:** Aspiring cloud engineers, solutions architects, and developers deploying to cloud.

**Prerequisites:** Basic networking and Linux helpful; cloud concepts taught from Week 1.

**Tools & lab environment:** AWS Free Tier, Azure free account, GCP free tier, AWS CLI, Azure CLI, gcloud CLI, Terraform (6-month+).

**Distinction from Track 7:** Track 8 focuses on **cloud provider services and architecture**. Track 7 focuses on **DevOps practices** (Docker, K8s, CI/CD) that run on any cloud.

**Certification targets:** AWS SAA-C03 (6-month), AZ-900/AZ-104 (9-month)

### Outcomes by Duration

| Duration | Hours   | Job Readiness             | Key Deliverables                            |
|----------|---------|---------------------------|---------------------------------------------|
| 2 Weeks  | 40–50   | Cloud awareness           | 3-tier AWS architecture deployed            |
| 1 Month  | 80–100  | Junior cloud basics       | Full 3-tier AWS project                     |
| 3 Months | 250–300 | Multi-cloud familiarity   | One project per platform                    |
| 6 Months | 500–600 | SAA-C03 ready             | Multi-cloud DR solution                     |
| 9 Months | 750–900 | Solutions architect level | Enterprise multi-tier + serverless platform |

### Weekly Rhythm (All Durations)

Mon–Thu cloud console + CLI labs | Fri architecture milestone | Sat cost review | Sun architecture diagram documentation

2-Week Crash Course (AWS-focused)

Mini Project: Deploy 3-tier architecture | Level: L1

| Days  | Topics                                       | Lab                               | Self-Check                     |
|-------|----------------------------------------------|-----------------------------------|--------------------------------|
| D1-2  | Cloud concepts, IAM, EC2                     | Launch EC2 instance               | Principle of least privilege   |
| D3-4  | S3, VPC basics                               | Static website on S3              | Public vs private subnet       |
| D5-6  | RDS, load balancing intro                    | 2-tier web app                    | RDS Multi-AZ concept           |
| D7-8  | Lambda + API Gateway (serverless)            | Serverless API                    | Event-driven vs request-driven |
| D9-10 | Cost optimization, Well-Architected overview | <b>Deploy 3-tier architecture</b> | 6 pillars of Well-Architected  |

## 1-Month Foundation

**Capstone:** Full 3-tier AWS project | **Level:** L2

| Week | AWS Topics                       | Lab                            |
|------|----------------------------------|--------------------------------|
| W1   | IAM, EC2, S3, VPC                | VPC + EC2 setup                |
| W2   | RDS, ELB, Auto Scaling           | Scalable web app               |
| W3   | Lambda, API Gateway, DynamoDB    | Serverless API                 |
| W4   | CloudWatch, Route 53, deployment | <b>Full 3-tier AWS project</b> |

**W4 acceptance criteria:** - ☐ VPC with public/private subnets across 2 AZs - ☐ ALB → EC2 → RDS architecture diagram - ☐ CloudWatch alarms configured - ☐ Route 53 or CloudFront for DNS/CDN

---

3-Month Job Ready

| Month | Topics                                                      | Projects                              |
|-------|-------------------------------------------------------------|---------------------------------------|
| M1    | AWS core (IAM, EC2, S3, VPC, RDS)                           | AWS 3-tier project (enhanced)         |
| M2    | Azure fundamentals (VMs, Blob Storage, Azure Functions)     | Azure web app                         |
| M3    | GCP basics (Compute Engine, Cloud Storage, Cloud Functions) | GCP deployment + capstone integration |

**Capstone:** One integrated project demonstrating cross-cloud concepts (e.g., DR failover design document + partial implementation)

---

## 6-Month Professional

*AWS SAA-C03 exam guide aligned*

| Month | Focus                                                    | Project                                       |
|-------|----------------------------------------------------------|-----------------------------------------------|
| M1    | AWS core: IAM, EC2, S3, VPC                              | Secure VPC design                             |
| M2    | Resilient architectures: RDS Multi-AZ, ALB, Auto Scaling | HA WordPress site                             |
| M3    | Serverless: Lambda, API Gateway, DynamoDB, SQS/SNS       | Serverless image pipeline                     |
| M4    | Azure: VMs, App Service, Azure SQL, Functions            | Azure web app                                 |
| M5    | GCP: GKE, Cloud Run, BigQuery intro                      | GCP deployment                                |
| M6    | DR solutions, cost optimization, capstone + cert prep    | <b>Multi-cloud disaster recovery solution</b> |

**M6 Capstone acceptance criteria (L4):** - ☐ Primary workload on AWS with documented failover to Azure/GCP - ☐ RTO/RPO defined and tested - ☐ Cost analysis spreadsheet included - ☐ Mock SAA-C03 practice exam score 75%+

---

## 9-Month Advanced

**Capstones:** Enterprise multi-tier architecture + Serverless event-driven platform | **Level:** L5

**Additional modules:** ECS/EKS/AKS/GKE, hybrid cloud, migration strategies, AWS/Azure certification exam prep.

---

### Assessment Rubric (Track-Specific)

| Component      | Weight | Criteria                                             |
|----------------|--------|------------------------------------------------------|
| Weekly Quiz    | 20%    | Cloud concepts, service selection, IAM               |
| Lab Completion | 40%    | Resources created; CLI commands logged               |
| Project        | 30%    | Architecture quality, security, cost awareness       |
| Portfolio      | 10%    | Architecture diagrams, Terraform repos, cost reports |

---

### Recommended Resources

- [AWS SAA-C03 Official Exam Guide](#)
  - [AWS Free Tier](#)
  - [Microsoft Learn — Azure](#)
  - [Google Cloud Skills Boost](#)
- 

### Appendix: Mentor Notes

**Common pitfalls:** Over-provisioned instances; open security groups; no billing alerts; IAM users with excessive permissions.

**Cost control:** Set billing alerts Day 1; tear down resources after each lab; use free tier services only in 2-week/1-month tiers.

**Cross-track:** [Track 7 — DevOps](#) for CI/CD to cloud; [Track 6 — Cybersecurity](#) for cloud security labs.
