

Track 4: Mobile App Development

June 2026

Track 4: Mobile App Development

MR ROKESH TECHNOLOGY — Training & Internship Programs

Skill path: React Native / Flutter → Dart/JS → UI → Navigation → API → State → Deploy

Related: [Master Syllabus](#) | [Duration Framework](#) | [Project Progression](#)

Track Overview

Who this is for: Aspiring mobile developers targeting iOS/Android cross-platform roles.

Prerequisites: Basic programming helpful; JavaScript (React Native) or Dart (Flutter) taught from fundamentals.

Framework choice: | Framework | Language | Best For | |———|———|———| | **Flutter** | Dart | UI-rich apps, Google ecosystem, single codebase | | **React Native** | JavaScript/TypeScript | Web dev crossover, large npm ecosystem |

Tools: Android Studio, Xcode (Mac for iOS), VS Code, Flutter SDK / React Native CLI, Expo (RN), Firebase, SQLite/Hive.

Certification targets (9-month): Play Store / App Store published app

Outcomes by Duration

Duration	Hours	Job Readiness	Key Deliverables
2 Weeks	40–50	Basic app awareness	Deployed mini app (APK)
1 Month	80–100	Junior mobile dev basics	Food ordering / Todo sync app
3 Months	250–300	Internship-ready	E-commerce or Food Delivery capstone
6 Months	500–600	Job-ready	6 progressive apps + store prep
9 Months	750–900	Both Flutter + RN	Marketplace + AI productivity app

Weekly Rhythm (All Durations)

Mon–Thu UI + coding labs | Fri app milestone | Sat device testing + review | Sun README + screenshots

2-Week Crash Course (Pick Flutter OR React Native)

Mini Project: Deploy mini app | **Level:** L1

Days	Topics	App Built	Self-Check
D1-2	Setup, widgets/components, layouts	Hello World + UI screens	Explain widget/component lifecycle
D3-4	Navigation, forms, state basics	Calculator app	Stateful vs stateless difference
D5-6	API integration (REST), local storage	Weather / News app	async/await or Future handling
D7-8	Authentication flow, push notifications intro	Login + profile app	Secure token storage approach
D9-10	Build + APK/IPA basics	Deploy mini app	Walk through build pipeline

Flutter vs React Native parallel labs: Same app specs; framework-specific syntax handouts provided.

1-Month Foundation

Capstone: Food ordering / Todo sync app | **Level:** L2

Week	Topics	Project
W1	Dart/JS + framework fundamentals	Calculator + Notes app
W2	UI design, navigation, responsive layouts	Expense tracker
W3	API integration, state management (Provider/BLoC or Redux)	Weather / Movie app
W4	Auth, storage, deployment	Food ordering / Todo sync app

W4 acceptance criteria: - ☐ Login/register with token persistence - ☐ Offline read from local storage
- ☐ APK build shared; README with screenshots

3-Month Job Ready

Capstone: E-commerce or Food Delivery app | **Level:** L3

Month	Topics	Projects
M1	Framework mastery, UI, navigation	Calculator, Notes, UI clone (Instagram/Spotify)
M2	API, state management, local DB (SQLite/Hive)	Weather + Login sync app
M3	Push notifications, camera/GPS, testing, store deployment	E-commerce or Food Delivery app

M3 Capstone acceptance criteria: - ☐ Product/menu listing with cart and checkout flow - ☐ Push notification on order status change - ☐ Camera or GPS feature integrated - ☐ Unit/widget tests for critical screens

6-Month Professional

Scaler 6-month roadmap aligned

Month	Project	Skills
M1	Calculator	Programming basics
M2	Notes app	UI & navigation
M3	Weather app	API integration
M4	Login sync app	Auth & storage
M5	Chat app	Push notifications, real-time
M6	E-commerce app	Full-scale capstone + Play Store/App Store prep

M6 Capstone acceptance criteria (L4): - ☐ All prior app features integrated - ☐ Payment flow (test mode) or order tracking - ☐ Store listing assets prepared (icon, screenshots, description) - ☐ Beta release on internal track or TestFlight

9-Month Advanced

Capstones: Marketplace app + AI-powered productivity app | **Level:** L5

Additional modules: Both Flutter AND React Native; native modules (Swift/Kotlin bridges); offline-first architecture; E2E testing (Detox); CI/CD (EAS Build, Fastlane); performance optimization.

Capstone 1 — Marketplace: Multi-vendor listings, search, filters, in-app messaging

Capstone 2 — AI Productivity App: On-device or API-based AI feature, usage analytics, subscription model

Assessment Rubric (Track-Specific)

Component	Weight	Criteria
Weekly Quiz	20%	Framework concepts, navigation, state
Lab Completion	40%	App runs on emulator/device; UI matches spec
Project	30%	Features, UX, performance, demo
Portfolio	10%	GitHub, APK links, store listing drafts

Recommended Resources

- Flutter Documentation
- React Native Documentation
- Expo Documentation

Appendix: Mentor Notes

Common pitfalls: Not testing on physical devices; hardcoded API URLs; ignoring platform-specific UI guidelines; large image assets causing slow loads.

Hardware: Android device or emulator required; Mac needed for iOS builds in production track.

Cross-track: [Track 3 — Dart/JavaScript](#); [Track 1 — Full Stack](#) for API backend.
