

Track 18: AI Agent Development

June 2026

Track 18: AI Agent Development

MR ROKESH TECHNOLOGY — Training & Internship Programs

Skill path: LLM APIs → Tools → Memory → Planning → Multi-Agent → LangGraph → Production Agents

Related: [Track 17 — Prompt Engineering](#) | [Track 5 — AI/ML](#)

Track Overview

Who this is for: Developers building autonomous AI agents, copilots, and workflow automation systems.

Prerequisites: Python, REST APIs, basic [Prompt Engineering](#) (or concurrent enrollment).

Tools: OpenAI/Anthropic APIs, LangChain, LangGraph, CrewAI/AutoGen, Python, FastAPI, vector DBs, browser/API tools.

Outcomes by Duration

Duration	Hours	Job Readiness	Key Deliverables
2 Weeks	40–50	Agent awareness	Single-tool agent demo
1 Month	80–100	Junior agent dev	Research assistant agent
3 Months	250–300	Internship-ready	Multi-step workflow agent
6 Months	500–600	Production agent dev	Deployed agent platform
9 Months	750–900	AI engineer track	Multi-agent enterprise system

2-Week Crash Course

Days	Topics	Deliverable
D1–2	Agent concepts: tools, memory, planning loops	Architecture diagram
D3–4	Function calling, tool integration	Calculator + web search agent
D5–6	ReAct pattern, error handling	Task-completion agent
D7–8	Memory: short-term, vector store	Conversational agent with memory store
D9–10	Capstone integration	Working research assistant agent

1-Month Foundation

Week	Topics	Project
W1	LangChain agents, tools, chains	File analyzer agent
W2	Planning, task decomposition	Multi-step research agent
W3	Human-in-the-loop, guardrails	Approval-gated agent
W4	FastAPI wrapper, deployment	Deployed agent API

3-Month Job Ready

Month	Topics	Projects
M1	Agent architectures, tool design	2 single-agent apps
M2	LangGraph, state machines, retries	Workflow automation agent
M3	Multi-agent collaboration, capstone	Customer support multi-agent system

Capstone: Triage agent + specialist agents; logging; cost tracking; demo with 5 scenarios.

6-Month Professional

Month	Topics	Projects
M1–M3	As 3-month track	—
M4	Browser automation, API orchestration	Data collection agent
M5	Observability, tracing (LangSmith), evals	Monitored agent pipeline
M6	Production capstone	Enterprise workflow agent platform

9-Month Advanced

Capstones: Multi-agent SaaS copilot + autonomous ops agent with self-healing | **Level:** L5

Assessment Rubric

Component	Weight	Criteria
Weekly Quiz	20%	Agent patterns, tools, safety
Lab Completion	40%	Agents complete tasks reliably
Project	30%	Architecture, reliability, UX
Portfolio	10%	GitHub, demo videos, docs

Appendix: Mentor Notes

Safety: Always implement guardrails, rate limits, and human approval for destructive actions.

Cross-track: Requires [Track 17](#) foundations; pairs with [Track 7/15](#) for deployment.
