

Track 27: Blockchain

June 2026

Track 27: Blockchain

MR ROKESH TECHNOLOGY — Training & Internship Programs

Skill path: *Crypto Basics → Ethereum → Smart Contracts → Solidity → dApps → Web3 → DeFi/NFT Concepts*

Related: [Track 1 — Full Stack](#) | [Track 3 — Programming Languages](#)

Track Overview

Who this is for: Developers exploring decentralized applications, smart contracts, and Web3 engineering.

Prerequisites: JavaScript/Python; basic understanding of databases and APIs.

Tools: Ethereum, Solidity, Hardhat/Foundry, MetaMask, Remix, Ethers.js, IPFS, testnets (Sepolia).

Outcomes by Duration

Duration	Hours	Job Readiness	Key Deliverables
2 Weeks	40–50	Blockchain awareness	Simple smart contract + deploy
1 Month	80–100	Junior Web3 dev	Voting dApp on testnet
3 Months	250–300	Internship-ready	Full dApp with frontend
6 Months	500–600	Smart contract developer	Audited-style capstone project
9 Months	750–900	Web3 engineer	DeFi/NFT platform capstone

2-Week Crash Course

Days	Topics	Deliverable
D1–2	Blockchain, hashing, consensus, wallets	Concept quiz + MetaMask setup
D3–4	Ethereum, gas, accounts, transactions	Testnet transactions log
D5–6	Solidity basics, Remix IDE	Simple storage contract
D7–8	Hardhat setup, testing, deployment	Deployed testnet contract
D9–10	Ethers.js frontend integration	Web page reading contract data

1-Month Foundation

Week	Topics	Project
W1	Solidity: types, mappings, events, modifiers	Multi-function contract
W2	Hardhat, unit tests, deployment scripts	Tested token contract
W3	ERC-20/ERC-721 standards	Custom token or NFT
W4	React + Ethers.js dApp frontend	On-chain voting dApp

3-Month Job Ready

Month	Topics	Projects
M1	Advanced Solidity, security patterns	Secure escrow contract
M2	IPFS, The Graph, indexing	Decentralized storage dApp
M3	Full-stack dApp, capstone	Marketplace or crowdfunding dApp

Capstone: Smart contract + React frontend + testnet deployment + test suite.

6-Month Professional

Month	Topics	Projects
M1–M3	As 3-month track	—
M4	Security: reentrancy, overflow, audit checklist	Security review report
M5	Layer 2, cross-chain concepts	L2 deployment demo
M6	Capstone	Production-quality dApp with security audit doc

9-Month Advanced

Capstones: DeFi lending protocol (testnet) + NFT marketplace with royalties | **Level:** L5

Assessment Rubric

Component	Weight	Criteria
Weekly Quiz	20%	Blockchain, Solidity, Web3 concepts
Lab Completion	40%	Contracts compile, tests pass
Project	30%	Security, UX, testnet deployment
Portfolio	10%	GitHub, Etherscan links, docs

Appendix: Mentor Notes

Security first: Cover common vulnerabilities every week. Never deploy to mainnet with real funds in training.
